REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: None of the prior art teaches or suggests the claimed invention. Specifically, claim 1 stipulates embedding a source message as a watermark in a cover work by applying an extraction process to a cover work to
5 obtain an extracted vector, searching a subset of a one-to-many code that corresponds to the source message to identify a code vector in the subset that yields the highest detection value when compared against the extracted vector, creating a mixed vector and applying an inverse extraction process to the mixed vector and the cover work. While Miller '736 (US 6,128,736 A) teaches applying an extraction process to a cover work and applying a watermark based on the
10 results of the extraction process, Miller '736 fails to teach searching a subset of a one-to-many code corresponding to the message for a code vector that yields the highest detection value compared to the results of the extraction processing, as claimed. In addition, claim 17 stipulated detecting a message in a work by applying an extraction process to the work to obtain an extracted vector, searching a one-to-many code to find a code vector that yields the highest
15 detection value when compared against the extracted vector and identifying the message that corresponds to the subset of the one-to-many code that contains the found code. While Miller '736 detects a message using an extraction process, Miller '736 fails to teach searching a one-to-many code to find a code vector that yields the highest detection value when compared against the extracted vector and identifying the message using the found code, as claimed. Therefore,
20 the claimed invention is allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Claims 1-26 are allowed.

3. The prior art made of record and not relied upon is considered pertinent to applicant's

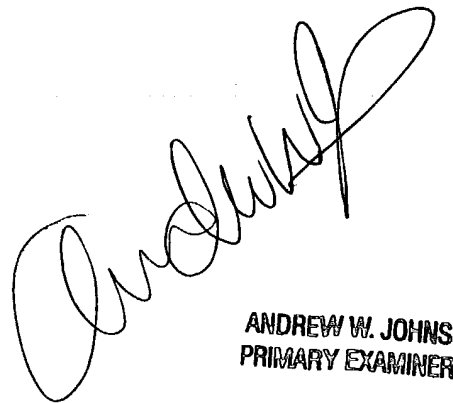

disclosure. The Rhoads references each teaches identifying characteristics of a cover work that best conceal a watermark, but neither suggests the use of a one-to-many code in the manner stipulated by the claimed invention.
